Portfolio Setup Guide

A step-by-step installation guide for the COGENSZ Portfolio – a high-performance, cinematic portfolio built with Vite, React 19, Tailwind CSS v4, and Framer Motion. Follow this guide to get the project running on your local machine in under 5 minutes.

✦ github.com/cogensz/cogensz-portfolio

TECH STACK

01

React 19

Vite 8

Tailwind CSS v4

Framer Motion 12

Lucide React

JetBrains Mono

Inter

PREREQUISITES

02

Node.js

Required: `>= 18.x` (LTS recommended)
nodejs.org/en/download

npm

Required: `>= 9.x`
Bundled with Node.js

Git

Any recent version
git-scm.com

Code Editor

VS Code recommended
code.visualstudio.com

INSTALLATION

03

1

Clone the Repository

Download the project source code from the COGENSZ portfolio repository.

```
git clone https://github.com/cogensz/cogensz-portfolio.git
cd cogensz-portfolio
```

2

Install Dependencies

Install all packages defined in `package.json` – React, Framer Motion, Tailwind, and all dev tools.

```
npm install
```

3

Start the Development Server

Launch Vite's hot-module-replacing dev server. Changes reflect instantly in the browser.

```
npm run dev
```

Expected output:

```
VITE v8.0.0 ready in ~300 ms
```

```
→ Local:   http://localhost:5173/
```

```
→ Network: use --host to expose
```

✦ Open **`http://localhost:5173`** in your browser. The page hot-reloads automatically on every file save – no manual refresh needed.

4

Build for Production (optional)

When ready to deploy, generate an optimised production bundle in the `/dist` folder.

```
npm run build      # compile & optimise → /dist
npm run preview    # preview the production build locally
```

SCRIPTS REFERENCE

04

REFERENCE	
COMMAND	DESCRIPTION
<code>npm run dev</code>	Start local dev server at localhost:5173
<code>npm run build</code>	Build optimised production bundle to /dist
<code>npm run preview</code>	Preview the production build locally
<code>npm run lint</code>	Run ESLint across all source files

No variables are required by default. If you extend the project with a contact form or CMS, create a `.env` file at the project root:

```
# Never commit this file — it is listed in .gitignore
VITE_API_URL=https://your-api-endpoint.com
VITE_EMAILJS_SERVICE_ID=your_service_id
VITE_EMAILJS_TEMPLATE_ID=your_template_id
VITE_EMAILJS_PUBLIC_KEY=your_public_key
```

✦ All Vite environment variables **must** be prefixed with **VITE_** to be exposed to the browser. Never put secret keys in client-side code.
